Central Technologies Statement Regarding California Proposition 65

Proposition 65, officially known as the California Safe Drinking Water and Toxic Enforcement Act of 1986, aims to protect Californians from significant exposure to chemicals known to the state of California to cause cancer, birth defects, or reproductive harm. California Proposition 65 obligates businesses operating in the state of California to provide clear and reasonable warnings before knowingly and intentionally exposing California citizens to chemicals that are listed in the Proposition 65 list.

Presently and to the best of our knowledge and based upon the information available to us, some of our products contain CA Proposition 65 listed substances. Although these chemicals are incorporated in some of our products, there is no exposure route, such as contact with skin, being ingested with food or drink, or inhalation in the normal or foreseeable use intended. Therefore, a warning label that our products contain chemicals that may cause cancer, birth defects, or reproductive harm is not required.

If requested, Central Technologies can provide information on chemicals contained in our products. By requesting this information Californians can make informed decisions about their risk of exposure to these chemicals.

People or companies operating in California, intending to use Central Technologies products for different uses, other than normal suggested product usage, may cause exposure risk to Proposition 65 chemicals if present. To mitigate and reduce the risk of exposure, Central Technologies recommends the use of approved safety equipment, including the use of dust masks, protective gloves, and additionally recommends work of this nature be performed in a well ventilated area.

These precautions should be taken for job-related uses including but not limited to destructive physical analysis.
